

Backend Developer | C# / .NET

My background combines professional experience at Impulse B2B, where I worked on API development and automation using JavaScript, with independent web development projects I have been running since 2025. This combination gave me exposure both to working within a development team and to the responsibility of owning a project end-to-end, on my own, for real clients. I am currently focusing my studies and work on the C#/.NET ecosystem, aiming to deepen my knowledge of backend development, software architecture and API best practices.
